

CLAIMS

I claim:

1. A trailer hitch assembly for a motorcycle comprising:

- elongated first side member which removably attaches to one side of the rear frame of the motorcycle;
- a second side member which removably attaches to the opposite side of the rear frame;
- a cross member surface that connects the first and second side members at the rear end of the first and second sides; and
- a hitch mechanism attached to the cross member for removable connection with and towing of a trailer.

2. A trailer hitch assembly as set forth in Claim 1 wherein the hitch mechanism is removably attached to the cross member.

3. A trailer hitch assembly of claim 1 where the hitch mechanism is attached to the trailer by an extension piece.

4. The assembly of Claim 1 where the side pieces fit inside the fender.

5. The assembly of Claim 1 where the side pieces fit outside of the fender;

6. The assembly of Claim 1 where the hitch mechanism is a ball hitch;

7. An extension piece for attaching a hitch mechanism on a motorcycle to a trailer tongue to keep the tongue relatively horizontal comprising:

- an extension piece with a front attachment and a rear attachment;
- the front attachment having a removable connection for the hitch mechanism on the motorcycle;
- the rear attachment connectable to the tongue of the trailer;
- where the height difference when installed between the front and rear connectors equals the height difference between the front hitch on the motorcycle and the tongue on the trailer.
